

A.I. TEMPERATURE SCANNER

TAKE CHARGE OF HEALTH & SAFETY IN YOUR WORKPLACE WITH AUTOMATED TEMPERATURE SCANNING

Designed to safeguard your employees and visitors.

The temperature scanner system can be deployed at your business premises to minimise risk during this time of pandemic uncertainty and facilitating the 'new normal' way of life. Eliminate the manual and tedious task of measuring visitors and employees with an automated body temperature tracking system. Ensure your employees and business is protected and comply with good screening practices.

The temperature scanner is designed to capture and recognised human faces while recording temperatures simultaneously. Put in place an early detection thermal temperature scanner where it matters most to promote confidence while ensuring safety.

CAPTURE

Facial recognition with temperature detection

SCREEN

Produce accurate results with minimal ambient interference

ALERT

Smart alert upon elevated temperature detection

PROACTIVELY SCREEN VISITORS AND STAFF BODY TEMPERATURE

In this period during and after movement restriction (MCO), business owners are expected to put in place measures to protect employees and visitors to your business premise. Besides good sanitization and prevention SOPs, effective temperature recording is crucial to ensure you screen and protect people in your business. **We offer 2 thermal scanner models to suit your business needs. Temperature screening helps minimise potential risks.**

- Retirement & nursing homes
- Exhibition halls & stadiums
- Malls, grocery stores & supermarkets
- Banks, kiosks and government buildings
- Airports, e-gates, hotels (travel sector)

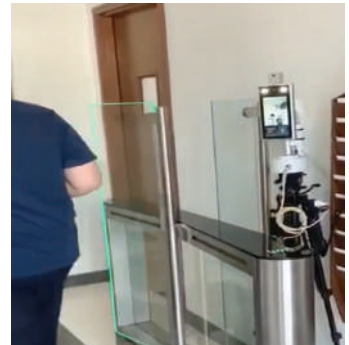

A.I. BASED TEMPERATURE SCREENING SYSTEM

- Facial recognition with temperature detection (+/- 0.3 degrees Celsius)
- Multi scanning (up to 8 faces simultaneously)
- A.I. algorithm for accurate results with minimal ambient interference
 - + System traces forehead and capture temperature, ambient temperature does not influence accuracy
 - + Support mask and glasses mode
- Integrated Android server
- Personnel login and entry for record tracking
- Dynamic on-screen temperature display
- Easy setup and installation. Can be standalone or wall mounted.
- Local & Cloud access to scanning data for integration to 3rd party systems
- Remote Cloud management for multiple devices

INDIVIDUAL TEMPERATURE SCREENING SYSTEM

- Facial recognition with temperature detection (+/- 0.3 degrees Celsius)
- Single pass, personnel scanning only
- Integrated Linux server
- Simple on-screen temperature display with recording
- Light weight and easy setup
- Local & Cloud access to scanning data for integration to 3rd party systems
- Remote Cloud management for multiple devices
